

A managed forest is a healthy forest...

and profitable forest.

If you are a private landowner with 20 or more acres of forested land you are eligible for the Sappi Private Forest Management program.

Why forest management? The benefits are three-fold — a managed forest is healthier, attracts more wildlife and you profit from the stumpage Sappi harvests. Our program promotes individualized forest management and harvest techniques to provide healthier growth of your forest.

Call (218) 878-4312 to see how you can profit from a managed forest.
